Thinking of Waiting to Buy pTGC?

Why Getting In Early Pays:

Buy 100M pTGC now → Earn ~56,565 daily reflections at \$1M volume

Reflections compound daily → That's +5.7M tokens by year's end

If price goes 37x (.0003058 → .0114398):

Day 1 reflections = \$17 → Becomes \$647 after price pumps

Year-end reflections worth: \$65,419

It's not just \$18 x 365...It's exponential compounding.
